**Abstract** - This article explores Myntra's Brand VMS (Video Management System), highlighting its functionality, benefits, and technological backbone. It provides insights into how VMS supports vendor management and retail scalability in India's growing e-commerce sector.

### Description

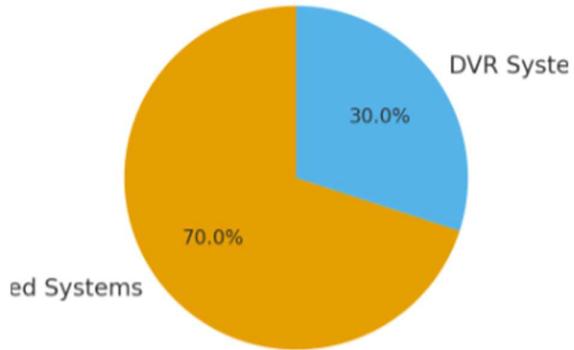

Myntra's Brand VMS (Video Management System) is a groundbreaking solution that strengthens vendor and inventory oversight, aligning with the rapid growth of India's e-commerce industry. For students and educators exploring science fair projects in India, school STEM projects, or the best projects 2025, the VMS framework offers a unique case study of digital transformation. It demonstrates the synergy of technology, retail, and compliance. Just as DIY kits in India empower innovation at a grassroots level, Myntra's VMS exemplifies how advanced video management tools can bring structure, transparency, and efficiency. By leveraging cloud-based infrastructure over traditional DVR systems, the platform ensures scalability, cost-effectiveness, and regulatory compliance. This model resonates with the principles behind STEM learning, where practical solutions are built to solve real-world problems. As Indian businesses evolve through 2025-2026, such digital ecosystems will serve as the blueprint for both educational projects and corporate innovation.
