**Abstract** - Order picking inefficiencies are among the biggest hurdles in warehouse management. This article explores common challenges such as human errors, delays, and productivity gaps, and highlights how Pick-to-Light (PTL) systems offer a technology-driven solution to streamline operations.

### Description

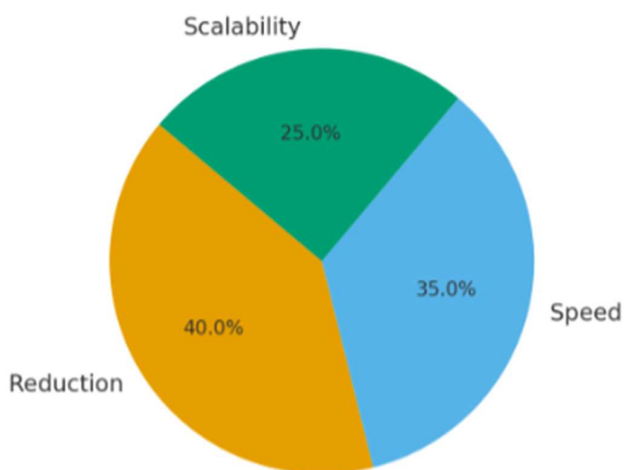

In the dynamic logistics and supply chain industry of India, addressing order picking challenges is critical for efficiency and growth. Pick-to-Light technology provides an innovative, real-time solution to reduce human errors, optimize accuracy, and enhance speed in fulfilment centres. This makes it highly relevant for warehouse optimization as well as modern learning contexts like science fair projects India, school STEM projects, and DIY kits India, where students can replicate automation models for practical learning. As businesses seek the best projects 2025 in logistics and technology, PTL offers both industry applications and educational value. By combining cost-effectiveness, scalability, and compliance benefits, Pick-to-Light is emerging as a transformative solution that addresses traditional warehouse inefficiencies while inspiring innovation for the future.
