²ruchi@wud.ac.in

Abstract: In an era of digital acceleration and increasing disconnection from traditional spiritual practices, there is a growing demand for culturally rooted and accessible spiritual guidance. This research introduces Dron-Acharya—a virtual darshan and consultation platform that reimagines the Indian guru-shishya tradition for a tech-savvy, global audience. Unlike mainstream mindfulness apps like Calm or Headspace, Dron-Acharya emphasizes personalized, Vedic-based spiritual experiences.

The study aims to design a platform that combines ancient spiritual wisdom with modern usability, addressing key user needs such as authenticity, personalization, intuitive design, and access to knowledgeable gurus. Using a mixed-method approach—surveys, interviews, competitor analysis, and persona development—the project identifies target users including urban professionals, Gen Z seekers, Indian diaspora, and elderly individuals seeking digital alternatives to physical ashrams.

The persona of Mayank Sharma, a 35-year-old professional, informed the design process, which followed the Double Diamond framework (Discover, Define, Develop, Deliver). Core features include AI-powered consultations, virtual blessings, interactive guru profiles, and a culturally immersive interface. Usability testing guided refinements such as multilingual support and audio-based navigation to ensure greater inclusivity.

While outcomes suggest strong potential for digital platforms to enrich spiritual engagement, this research primarily explores how tradition and technology can meaningfully intersect.

This study will benefit designers, spiritual organizations, and digital product developers by offering a framework to create authentic, accessible spiritual tech—serving users seeking depth, connection, and continuity in their spiritual journeys.

INTRODUCTION

In an increasingly digitized world, where technology permeates nearly every aspect of human life, the pursuit of inner peace, emotional resilience, and spiritual grounding has never been more essential. While advancements in digital health and wellness have spawned a new generation of mindfulness and mental wellness apps, these platforms often overlook a vital component of human well-being:

spiritual nourishment rooted in cultural heritage (Obuba, 2023; Hussain & Wang, 2024). For many, especially within the Indian diaspora and urban populations, traditional access to spiritual mentorship—such as visiting ashrams, consulting gurus, or engaging in ritualistic practices—has become limited due to time, distance, and modern lifestyles.

In this context, the role of technology must evolve beyond meditation timers and guided breathing exercises. It must serve as a bridge between ancient wisdom and contemporary accessibility (Darji, 2024). This research introduces Dron-Acharya, a digital platform designed to provide personalized spiritual engagement through virtual blessings, Vedic astrology readings, and AI-powered consultations with spiritual mentors. Named after the revered teacher from Indian epics, the platform draws inspiration from the guru-shishya (teacher-disciple) tradition, blending authenticity with immersive, modern design.

Unlike mainstream wellness apps such as Calm or Headspace, which prioritize generalized mindfulness content, Dron-Acharya centers its offering around culturally meaningful interactions. It brings spirituality back into the hands of users through curated, guru-led experiences that are emotionally resonant and contextually rich. The app is built with a deep sensitivity to Indian spiritual philosophies and user-centered design principles, offering features like language diversity, intuitive UI, and accessibility for all age groups.

This study explores the potential of spiritual technology to not just replicate, but meaningfully enhance, traditional practices. Through mixed-method research involving user interviews, market analysis, and prototype testing, it identifies the gap between spiritual need and digital accessibility. The platform

aims to empower users to reconnect with timeless practices without compromising the sanctity of those traditions.

Ultimately, this paper seeks to demonstrate that well-designed digital platforms can preserve spiritual heritage, democratize access to guidance, and improve emotional health on a global scale. Dron-Acharya is not just a product—it is a movement towards culturally conscious digital spirituality, where tradition and technology coexist to serve the evolving needs of modern seekers.

LITERATURE REVIEW

In an increasingly digitalized world, the integration of spirituality into digital platforms has gained notable academic interest. The following literature review employs the silo approach to analyze and synthesize key contributions from five primary studies focused on digital spirituality, user engagement, AI-enabled spiritual reading platforms, and the broader role of social media in religious practice.

Gupta et al. (2022) investigate the impact of a digital spiritual intervention—Maitri ShaktiPravaah—on mental well-being. Conducted with 420 participants, the study measured pre- and post-process changes using the Warwick-Edinburgh Mental Well-being Scale (WEMWBS). Results showed statistically significant improvements in participants' emotional energy, confidence, and feelings of connectedness (Gupta et al., 2022). The authors underscore the potential of digital spiritual processes to serve as scalable tools for enhancing psychological wellness, especially during periods of isolation like the COVID-19 pandemic. This research provides a foundation for viewing online spiritual interventions not just as coping mechanisms but as tools for preventive and promotive mental health care.

Smink (2022) explores user engagement within digital spiritual care platforms in the Netherlands. The study highlights that engagement is multifaceted, encompassing emotional, cognitive, and behavioural dimensions. Factors such as control, feedback, value co-creation, and platform findability were found to significantly influence user engagement (Smink, 2022). These findings align with broader service literature, suggesting that engagement is context-specific and dependent on the design and interactivity of the platform (Brodie et al., 2011; Patterson, 2006). Notably, Smink identifies that spiritual seekers appreciate personalization and feedback, pointing to the need for platforms that can adapt to individual user needs in real-time.

Darji (2024) introduces "Akshar Vachan," an AI-powered digital reading platform tailored to religious and spiritual texts. The study critiques mainstream platforms like Kindle and Google Play Books for their inadequate support for

structured religious texts. Akshar Vachan incorporates features such as synchronized audio narration, real-time text highlighting, interactive tools, and gamified elements like puzzles and reading trackers to enhance engagement and comprehension (Darji, 2024). This platform exemplifies how artificial intelligence and gamification can be strategically used to bridge the gap between traditional scripture reading and modern digital expectations. The findings reflect a shift toward digital spirituality as a more immersive, interactive, and inclusive experience.

Hussain and Wang (2024) present a qualitative study on how Pakistani pilgrims use social media throughout their pilgrimage journeys. Their five-phase model—preparation, real-time updates, community support, experience sharing, and post-trip reflection—demonstrates how digital platforms enhance traditional religious experiences (Hussain & Wang, 2024). Social media facilitates emotional support, logistical coordination, and spiritual dialogue, thus enriching the entire pilgrimage lifecycle. Furthermore, the study stresses that digital tools are not replacing physical experiences but extending their spiritual and social dimensions. This analysis underscores social media's transformative role in shaping 21st-century religiosity and fostering a sense of global religious community.

Obuba (2023) examines the interface between Christian spiritual leadership and digital technology, focusing on both the promises and pitfalls of spiritual apps and platforms. The paper discusses the benefits of virtual access to sermons, scriptures, and spiritual communities while cautioning against overdependence on technology at the expense of deep reflection and authentic experiences (Obuba, 2023). The work calls for balanced use, urging leaders to harness digital tools for outreach, teaching, and community building, while maintaining ethical standards and spiritual depth. This perspective enriches the discourse by integrating leadership responsibilities with digital adaptation strategies.

Taken together, these studies reveal a rich, multidimensional understanding of digital spirituality. From individual psychological benefits (Gupta et al., 2022) to AI-enhanced scriptural reading (Darji, 2024), and from user engagement dynamics (Smink, 2022) to the communal and reflective use of social media during pilgrimage (Hussain & Wang, 2024), the reviewed literature presents digital technology as a legitimate, even transformative, avenue for spiritual growth and engagement. However, as Obuba (2023) reminds us, the rapid digitization of spirituality must be approached with caution to avoid shallow experiences and spiritual commodification.

Future research could explore longitudinal effects of digital spiritual interventions, comparative studies between various religious traditions using digital platforms, and ethical frameworks for AI use in sacred contexts. Furthermore, the intersectionality of age, gender, and digital literacy with engagement levels in these platforms remains an underexplored domain.

RESEARCH PROBLEM

Despite a growing interest in mindfulness and spiritual well-being, users in India and across the diaspora lack access to personalized, culturally relevant spiritual platforms. Key issues include:

- Limited access to trustworthy gurus
- Over-commercialized, westernized wellness platforms
- Fragmented tools that do not offer integrated spiritual guidance

These gaps lead to spiritual dissatisfaction, reduced emotional clarity, and a disconnect from cultural identity.

1.1 RATIONALE

The global wellness app market is projected to reach USD 4.84 billion by 2030, growing at a CAGR of 14.4%. With India being one of the fastest-growing digital economies, there's a strong case for apps that address cultural wellness needs. Furthermore, a 2023 survey by YourDost found that 61% of Indian millennials prefer holistic healing, including astrology and mantra-based therapies. Yet, none of the dominant platforms offer these in an integrated or authentic manner.

Technologically, tools like voice recognition, chatbots, and AR/VR create new opportunities for immersive spiritual interaction. Hence, a platform like *Dron-Acharya* is not only relevant but timely.

1.2 AIMS AND OBJECTIVE

Aim: To design, develop, and evaluate a culturally grounded spiritual platform that bridges traditional guru-shishya values with modern usability standards.

Objectives:

1. **To identify and analyze gaps** in current wellness and spirituality apps, particularly those failing to offer culturally grounded spiritual guidance.

2. **To design and develop a prototype** of the *Dron-Acharya* platform using human-centered methodologies that integrate spiritual mentorship and AI.
3. **To evaluate user response and usability** through surveys and interviews, focusing on emotional engagement, cultural resonance, and ease of use.
4. **To explore the integration of immersive technologies** such as voice, audio blessings, and multilingual UI for a more inclusive spiritual experience.
5. **To propose a scalable model** for future spiritual technology platforms, incorporating VR/AR, real-time satsangs, and intelligent spiritual companions.

1.3 RESEARCH METHODOLOGY

This study adopted a **mixed-method research approach**, integrating both qualitative and quantitative methods to gain a comprehensive understanding of the need, desirability, and functionality of a culturally rooted spiritual booking platform like *Dron-Acharya*.

Quantitative Approach

To collect empirical data, a Google Form-based survey was designed and distributed across various online communities, including spirituality forums, wellness groups, and professional networks. The questionnaire targeted individuals aged 20–60 from diverse geographic and cultural backgrounds. A total of 180 responses were recorded. The survey aimed to assess spiritual habits, preferred digital platforms for wellness, barriers to spiritual connection, and openness to using a spiritual booking app. Key metrics included:

- Frequency of spiritual practices (meditation, prayers, astrology)
- Current digital usage for wellness
- Pain points in accessing spiritual guidance
- Willingness to pay for spiritual services
- Preferred features in a spiritual app

The quantitative data was statistically analysed using basic descriptive analytics (means, percentages, and trend observation). The results indicated that over 72% of respondents had previously searched online for spiritual or Vedic astrology content, while 63% expressed frustration with

the lack of personalized or authentic content in existing apps. Notably, 82% were open to trying an app like Dron-Acharya if it offered guru-led interactions and cultural immersion.

- Qualitative Approach

To complement the survey, **semi-structured interviews** were conducted with 12 individuals across different age groups and spiritual backgrounds. These interviews were designed to explore personal stories, emotional needs, and opinions on digital spirituality in greater depth. Participants discussed their relationships with traditional gurus, digital disconnection from culture, and expectations from a spiritual platform.

Additionally, a **prior literature study** was undertaken, focusing on the intersection of spirituality, mental health, digital wellness, and UI/UX for culturally sensitive apps. Key themes such as “techno-spirituality,” “digital darshan,” and “ritual simulation” informed the theoretical framework.

- Design Translation

Insights from both methods were consolidated and used to develop personas and user journey maps, leading to the prototype’s development. The data validated the need for a personalized, spiritually rich platform that doesn’t commodify the experience but preserves its authenticity.

- Ethical Considerations

Participant anonymity and data confidentiality were strictly maintained. Survey participation was voluntary and informed consent was obtained for interviews.

In conclusion, the mixed-method approach provided both breadth and depth, ensuring that the final product was data-driven, emotionally informed, and culturally relevant.

2. RESULTS AND DISCUSSIONS

The research findings from both the quantitative survey and qualitative interviews provided a nuanced understanding of user expectations, unmet needs, and the potential for a culturally immersive digital spiritual platform like Dron-Acharya. Together, these findings validated the core hypothesis: modern users—especially Indians, urban professionals, and the diaspora—are actively seeking spiritual tools that are not only accessible and intuitive but also deeply rooted in cultural authenticity.

Quantitative Results

A Google Forms survey conducted with 180 respondents provided critical insight into current spiritual practices and attitudes toward digital spirituality. Key findings included:

- 72% of respondents regularly engage in spiritual practices like meditation, chanting, or astrology but struggle to find platforms that align with their values.
- 63% reported dissatisfaction with current apps, citing superficial content and lack of real connection with spiritual mentors.
- 82% of users expressed strong interest in a platform offering personalized spiritual guidance and access to qualified gurus.
- 58% highlighted a preference for culturally resonant aesthetics and rituals, while 47% wanted Vedic astrology integrated into their digital wellness tools.
- Mobile accessibility and ease of use were considered essential by 91% of participants, affirming the need for intuitive UX.

These results reveal a market gap in spiritual technology—where generalized wellness apps fall short in delivering emotionally meaningful and culturally contextual content.

SURVEY RESPONSES

What is your age group ?

125 responses

What is your gender ?

125 responses

Do you consider yourself a spiritual person?

124 responses

How many hours a day do you spend on your smartphone?

125 responses

Do you believe spiritual guidance improves mental and emotional well-being?

125 responses

Have you used any spiritual/wellness apps?

124 responses

How often do you engage in spiritual practices (e.g., meditation, prayer)?

124 responses

If yes, What features did you like in those apps?

115 responses

Have you ever visited a spiritual guru or attended a satsang/ashram event?

125 responses

What features would you expect in a virtual darshan app?

117 responses

Which traditions or philosophies do you connect with spiritually?

121 responses

Would you like personalized one-on-one spiritual guidance through video/audio calls?

123 responses

Would you be open to receiving virtual blessings from a guru?

123 responses

Would you like a daily spiritual feed (quotes, stories, guru thoughts)?

123 responses

Would you try AR/VR-based features like 360° temple tours or immersive darshan?

123 responses

1. Perceptions of Spiritual Guidance and Well-being

A significant majority of respondents (75.2%) either *strongly agreed* (42.4%) or *agreed* (32.8%) that spiritual guidance contributes positively to mental and emotional well-being (Figure 1). This finding affirms the hypothesis that spirituality plays a critical role in psychological resilience, emotional regulation, and subjective well-being, especially in times of digital overload and existential uncertainty.

2. Spiritual Affiliation and Philosophical Alignment

When asked about their spiritual or philosophical affiliation, an overwhelming 86.8% of the 121 respondents identified with Hinduism, followed by minor representation from Jainism, Buddhism, Sufism, and Sikhism (Figure 2). This indicates that a majority of the target demographic resonates with Indic spiritual frameworks, suggesting the importance of aligning digital content and design language with Hindu symbols, rituals, and Vedic philosophy to ensure cultural authenticity.

3. Smartphone Usage Patterns

Data on digital behaviour revealed that 39.2% of respondents use their smartphones for more than six hours per day, while 25.6% reported usage of 4–6 hours (Figure 3). This validates the feasibility and accessibility of a mobile-first approach for delivering spiritual content, especially for urban, digitally immersed populations.

4. Adoption of Existing Spiritual/Wellness Applications

Despite high screen time, only 15.3% of the 124 respondents reported using any form of spiritual or wellness application (Figure 4). This stark contrast highlights a notable gap between digital consumption and spiritual tech engagement—pointing to an unmet need for culturally relevant and personalized digital spiritual solutions.

5. Perceptions of Existing App Features

Among those who had previously engaged with spiritual/wellness apps, a striking 62.6% indicated that they did not find the features appealing (Figure 5). Of the features liked, guided meditation (13%), daily affirmations (7%), and Vedic astrology (7%) emerged as the most noted. This suggests that existing applications may be lacking in depth, relevance, or cultural resonance, emphasizing the need for a more immersive and user-aligned spiritual platform.

6. Feature Expectations from a Virtual Darshan Application

The most desired features in a virtual darshan app were *mantras and guided meditation* (41%), *video/live sessions with gurus* (36.8%), and *personalized spiritual consultation* (31.6%) (Figure 6). These preferences reflect a clear demand for interactivity, personalized engagement, and spiritual authenticity, rather than static or generic content.

7. Interest in One-on-One Spiritual Guidance

When queried about the appeal of personalized spiritual guidance via video/audio calls, 40.7% responded positively, with an additional 28.5% responding “maybe” (Figure 7). This demonstrates a strong potential for one-on-one or AI-facilitated consultations as a key feature of spiritual tech platforms—mirroring the traditional guru-shishya dynamic in a contemporary digital form.

8. Openness to Receiving Virtual Blessings

Approximately 39.8% of users expressed openness to receiving blessings digitally, with 28.5% indicating conditional openness (Figure 8). This indicates an emerging acceptance of digitized rituals, provided they are delivered with integrity and reverence.

9. Interest in AR/VR-Based Features

A substantial 41.5% of respondents were enthusiastic about AR/VR-based immersive features such as 360° temple tours or virtual darshans, and 33.3% expressed conditional interest (Figure 9). These findings support the integration of immersive technologies to enhance user experience and ritual presence in a remote setting.

10. Preference for Daily Spiritual Content

Lastly, 50.4% of participants expressed interest in receiving daily spiritual feeds comprising quotes, stories, or guru thoughts (Figure 10). This suggests a desire for continual, bite-sized spiritual engagement—underscoring the need for daily content delivery mechanisms such as notifications or feeds within the app.

Synthesis and Implications

The collective analysis of user data highlights a high degree of digital literacy, spiritual interest, and a clear gap in satisfying culturally aligned spiritual needs through existing apps. The findings validate the core premise of the *Dron-Acharya* platform—users seek authentic, personalized, and immersive spiritual experiences that are rooted in tradition but delivered with modern technological fluency.

By incorporating features like live guru sessions, AI-driven consultations, spiritual calendars, and AR/VR integrations, the platform can effectively bridge this spiritual-tech divide. Additionally, multilingual support and daily spiritual feeds can further democratize access across age groups and linguistic barriers.

Qualitative Insights

To complement the survey, 10+ in-depth interviews were conducted with individuals aged 20 to 65, including working professionals, homemakers, students, and retirees. These conversations offered rich, emotional context to the data:

A 27-year-old user described current apps as “mechanical,” lacking the human warmth of real spiritual interactions.

A 58-year-old participant emphasized the importance of “guru kripa” (spiritual grace) and expressed the need for apps to reflect sacred traditions, not just replicate them.

Multiple users mentioned the emotional gap they feel living away from ashrams or spiritual communities, and how technology—if done right—could bridge that divide.

A repeated theme was the desire for personalization, where users felt guided not by generic meditations, but by inputs that

align with their spiritual needs, zodiac profiles, or life questions. Several interviewees also showed enthusiasm for voice-based content, regional language options, and visually meditative design.

User Testing and Validation

High-fidelity prototypes were tested with selected users from the target demographic. The feedback was overwhelmingly positive, particularly regarding:

The user interface, which was praised for being peaceful, intuitive, and visually aligned with Indian spiritual aesthetics.

Features like virtual blessings, AI-powered guru consultations, and Vedic astrology, which users described as “soulful,” “respectful,” and “practical.”

Suggestions such as dark mode, multilingual support, and offline access were implemented after feedback, further enhancing usability.

Overall Synthesis

The quantitative data affirmed a broad market interest, while qualitative interviews revealed emotional, cultural, and spiritual desires that generalized wellness platforms fail to meet. This validates *Dron-Acharya* as a viable, desirable, and needed product. The app doesn’t aim to replace traditional spiritual experiences, but rather enhance access, preserve sanctity, and scale authentic connections in a digital format.

In conclusion, the research confirms that there is a significant, unmet demand for an app like *Dron-Acharya*, which blends technology with tradition, personalization with spirituality, and design with devotion. It is not just a digital tool—but a spiritual lifeline for the modern world.

CONCLUSION

Dron-Acharya represents a paradigm shift in spiritual tech—one that places cultural authenticity and emotional resonance at its core. Its successful usability metrics and user validation indicate strong potential for market launch and wider impact. By digitally reviving the guru-shishya tradition, the app not only serves individual wellness but also cultural preservation. Future steps include integrating AR/VR for immersive temple visits, expanding guru onboarding, and launching a multilingual MVP for wider adoption.
